2028_REC_OOPS using Java_Week 8_Q1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotExceptionAtTheRateExceptionDomainException

A typical email address should have a " . " character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

Input Format

The first line of input contains the email to be validated.

Output Format

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

Sample Test Case

Input: sample@gmail.com
Output: Valid email address

Answer

```
import java.util.*;

class DotException extends Exception{
   public DotException(String message){
      super(message);
   }
}
class AtTheRateException extends Exception{
   public AtTheRateException(String message){
      super(message);
   }
}
class DomainException extends Exception{
   public DomainException(String message){
      super(message);
   }
}

public class Main{
   public static void main(String[] args){
      Scanner sc = new Scanner(System.in);
      String email = sc.nextLine();

      try{
         validateEmail(email);
         System.out.println("Valid email address");
      }
      catch(DotException e){
         System.out.println("DotException: " + e.getMessage());
         System.out.println("Invalid email address");
      }
      catch(AtTheRateException e){
```

```
            System.out.println("AtTheRateException: " + e.getMessage());
            System.out.println("Invalid email address");
        }
        catch(DomainException e){
            System.out.println("DomainException: " + e.getMessage());
            System.out.println("Invalid email address");
        }
    }

    public static void validateEmail(String email) throws DotException,
AtTheRateException, DomainException{
        int atCount = email.length() - email.replace("@", "").length();
        if(atCount != 1){
            throw new AtTheRateException("Invalid @ usage");
        }

        if(email.startsWith(".") || email.endsWith(".") || email.startsWith("@") ||
email.endsWith("@")){
            throw new DotException("Invalid Dot usage");
        }

        if(email.contains("..") || email.contains("@@")){
            throw new DotException("Invalid Dot usage");
        }

        int atIndex = email.indexOf("@");
        String afterAt = email.substring(atIndex + 1);
        if(!afterAt.contains(".")){
            throw new DotException("Invalid Dot usage");
        }

        if(email.endsWith(".")){
            throw new DotException("Invalid Dot usage");
        }

        int lastDot = email.lastIndexOf(".");
        String domain = email.substring(lastDot + 1);
        List<String> validDomains = Arrays.asList("in", "com", "net", "biz");
        if(!validDomains.contains(domain)){
            throw new DomainException("Invalid Domain");
        }
    }
```

```
}
```
