Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a user registration system, there is a requirement to implement a username validation module. Users attempting to register must adhere to specific criteria for their usernames to be considered valid.

Your task is to develop a program that takes user input for a desired username and validates it according to the following rules:

The username must not contain any spaces. The username must be at least 5 characters long.

Implement a custom exception, InvalidUsernameException, to handle cases where the entered username does not meet the specified criteria.

Input Format

The input consists of a string S, representing the desired username.

Output Format

If the username is valid, print "Username is valid: [S]" .

If the username is invalid:

1. If the username is short, print "Invalid Username: Username must be at least 5 characters long"
2. If the username contains spaces, print "Invalid Username: Username cannot contain spaces"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: John

Output: Invalid Username: Username must be at least 5 characters long

Answer

```
import java.util.*;  
  
class InvalidUsernameException extends Exception{  
    public InvalidUsernameException(String message){  
        super(message);  
    }  
}  
  
public class Main{  
    public static void validateUsername(String name) throws  
    InvalidUsernameException{  
        if(name.contains(" ")){  
            throw new InvalidUsernameException("Invalid Username: Username  
cannot contain spaces");  
        }  
        if(name.length() < 5){  
            throw new InvalidUsernameException("Invalid Username: Username must  
be at least 5 characters long");  
        }  
    }  
}
```

```
public static void main(String[] args){  
    Scanner sc = new Scanner(System.in);  
    String name = sc.nextLine();  
  
    try{  
        validateUsername(name);  
        System.out.println("Username is valid: " + name);  
    }  
    catch(InvalidUsernameException e){  
        System.out.println(e.getMessage());  
    }  
}  
}
```

Status : Correct

Marks : 10/10
